# 1 Overview

## 1.1 Preface

The “Data Classification and Encoding Guide” has been developed to provide consistent, standardized instructions for encoding S-411 data.

The purpose of the Data Classification and Encoding Guide is to facilitate S-411 encoding to meet JCOMM—ETSI standards for the proper display of Ice Information in an ECDIS. The document describes how to encode ice information considered relevant to be displayed on an ECDIS. The content of an Ice Information product is at the discretion of the producing authority provided that the conventions described within this document are followed. A “producing authority” is a Hydrographic Office (HO) or an organization authorized by a government, HO or other relevant government institution to produce Ice Information product.

The entire S-411 Standard, including the S-411 ENC Product Specification, is available at the following web site, <https://iho.int/>.

## 1.3 Terms, definitions and abbreviations

### 1.3.1 Terms and definitions

See S-411 Product Specification Main document, clause 1.3.2.

### 1.3.2 Abbreviated terms

For a list of abbreviations, see the Ice Information Product Specification, Clause 1.3.3.

## 1.4 Use of language

Within this document:

- “Must” indicates a mandatory requirement.

- “Should” indicates an optional requirement, that is the recommended process to be followed, but is not mandatory.
- “May” means “allowed to” or “could possibly” and is not mandatory.

## 1.5 Maintenance

Changes to the Data Classification and Encoding Guide must occur in accordance with the S-411 Ice Information Product Specification clause 1.6.

### 2.2 Introduction

This S-411 Data Classification and Encoding Guide (DCEG) contains rules and guidance for converting data describing the real world into data products that conform to the S-411 specification.

The S-411 specification contains an application schema (UML model) describing the conceptual domain model in terms of classes and a Feature Catalogue (see S-411 Annex B) that specifies the data model, i.e., specifies the data model types corresponding to the various classes in the application schema.

To simplify the DCEG text, the various data model types will be provided without the suffixes “class”, “type” or “instance”; e.g. the term “feature” should be understood as “feature class” or “feature type” or “feature instance” as best fits the immediate context in which it is used (and where there might be confusion, it is written out in full as feature class/type/instance). The model defines real world entities as a combination of descriptive and spatial characteristics (S-411 Product Specification clause 6).

This clause of the DCEG contains general information needed to understand the encoding rules and describes fundamental common rules and constraints. It also describes datasets and metadata. The data model object types used within S-411 and their encoding rules and guidelines are defined in detail in subsequent clauses of this document.

Within this document the features and attributes appear in **bold text** or *italic text*, to distinguish them from surrounding words.

## 2.3 Descriptive characteristics

### 2.3.1 Feature

A feature contains descriptive attributes that characterize real world entities.

The word 'feature' as used in the ISO 191xx series and in S-100 based product specifications has two distinct but related senses – 'feature type' and 'feature instance'. A feature instance is a single occurrence of the feature and is represented as an object in a dataset.

The location of a feature instance on the Earth's surface is indicated by a relationship to one or more spatial primitive instances.

S-411 only makes use of the **Geographic (Geo) feature type** which carries the descriptive characteristics of a real-world entity.

### 2.3.2 Geographic feature class

**Geographic (Geo) feature types** carry the descriptive characteristics of a real world entity which is provided by a spatial primitive instance.

### 2.3.3 Meta feature class

**Meta feature type** contains information about other features.

### 2.3.4 Charted background feature

The data product would mostly be visualized as an overlay of an ENC or other GIS applications. Consequently, all necessary descriptive and spatial characteristics to provide a charted background should be provided by the underlying application.

## 2.4 Spatial characteristics

### 2.4.1 Spatial primitives

The allowable geometric primitive for each feature type is defined in the Feature Catalogue. Allowable geometric primitives are point, curve and surface. Each spatial value must be referenced by at least one feature instance.

Within this document, allowable primitives are included in the description of each feature type. For easy reference, Table 2-1 below summarises the allowable geometric primitives for each feature. In the Table, abbreviations are as follows: point (P), curve © and surface (S).

**Table — Features and their spatial primitives**

## 4.14 Iceberg

**Table 4-27**

<b>IHO Definition :</b> An Iceberg is a massive piece of ice, greatly varying in shape and showing more than 5 meters above the sea surface which has broken away from a glacier, and which may be afloat or grounded. This Object Class also includes smaller forms of glacial ice, known as “Bergy Bits” and “Growlers”, which are defined by their size Attribute. ICEBRG can indicate the location of a single iceberg or, if the attribute IA_OBN is specified and is greater than 1, multiple icebergs in the vicinity of a point.

### 5.3 Contamination

**Table 5-3**

**IHO Definition** : IA\_PLG describes the degree of contamination (aerial coverage) in thirds based on the Russian national 3-point scale.

**Attribute Type** : enumeration

1) 01

**IHO Definition** :No or insignificant Contamination

10) 10

**IHO Definition** :<1/3 of area

12) 12

**IHO Definition** :<2/3 of area

**IHO Definition** :Undetermined/Unknown

**Remarks** :

### 5.4 Direction of Sastrugi

**Table 5-4**

**IHO Definition** : ICEDOS indicates the bearing of a sastrugi. Sastrugi are sharp, irregular ridges formed on a snow surface by wind erosion and deposition. On mobile floating ice the ridges are parallel to the direction of the wind at the time they were formed.

**Attribute Type** : enumeration

1) 01

**IHO Definition** :No Sastrugi

## 5.6 Frequency of Leads or Fractures

**Table 5-6**

<b>IHO Definition :</b> ICERFQ indicates the frequency of leads or fractures in number per nautical mile.
<b>Attribute Type :</b> integer
<b>Remarks :</b>

## 5.7 Hills Concentration

**Table 5-7**

<b>IHO Definition :</b> IA_HLG describes the degree of hilling in an ice area (usually multi-year ice).
<b>Attribute Type :</b> enumeration
1) 01
<b>IHO Definition :</b> Few hills
10) 10
<b>IHO Definition :</b> Slight concentration of hills
12) 12
<b>IHO Definition :</b> Slight to moderate concentration of hills
20) 20
<b>IHO Definition :</b> Moderate concentration of hills
23) 23
<b>IHO Definition :</b> Moderate to heavy concentration of hills
30) 30
<b>IHO Definition :</b> Heavy concentration of hills
98) 98
<b>IHO Definition :</b> No hills
99) 99

**IHO Definition** :Undetermined/Unknown

**Remarks** :

## 5.8 Ice Average Thickness

**Table 5-8**

**IHO Definition** : Ice Average Thickness defines the average thickness of the ice.

**Attribute Type** : integer

**Remarks** :

## 5.9 Iceberg Size

**Table 5-9**

**IHO Definition** : The “Iceberg Size” categorizes the size of an iceberg.

**Attribute Type** : enumeration

1) 01

**IHO Definition** :Growler (<1m asl)

2) 02

**IHO Definition** :Bergy Bit (1-<5m asl; 5-<15m length)

3) 03

**IHO Definition** :Small Iceberg (5-15m asl; 15-60m length)

4) 04

**IHO Definition** :Medium Iceberg (16-45m asl; 61-120m length)

5) 05

**IHO Definition** :Large Iceberg (46-75m asl; 121-200m length)

6) 06

**IHO Definition** :Very Large Iceberg (>75m asl; >200m length)

7) 07

**IHO Definition** :Ice Island Fragment

8) 08

**IHO Definition** :Ice Island (in the Northern Hemisphere) or Very Large Tabular Berg (in the Southern Ocean)

9) 09

**IHO Definition** :Radar Target

99) 99

**IHO Definition** :Undetermined/Unknown

**Remarks** :

## 5.10 Ice Drift Direction

**Table 5-10**

**IHO Definition** : ICEDDR indicates the direction in which an ice mass is drifting.

**Attribute Type** : enumeration

1) 01

**IHO Definition** :No Ice Motion

2) 02

**IHO Definition** :Ice Drift to NE

3) 03

**IHO Definition** :Ice Drift to E

**IHO Definition** :Undetermined/Unknown

**Remarks :**

## 5.11 Ice Drift Speed

**Table 5-11**

**IHO Definition** : ICEDSP describes the speed in knots at which an ice mass is traveling.

**Attribute Type** : real

**Remarks :**

## 5.12 Ice Fracture Type

**Table 5-12**

**IHO Definition** : ICEFTY indicates the type of fracture, based upon width.

**Attribute Type** : enumeration

1) 01

**IHO Definition** :Crack (0 to 1m wide)

2) 02

**IHO Definition** :Very Small Fracture (>1m to 50m wide)

3) 03

**IHO Definition** :Small Fracture (>50m to 200m wide)

4) 04

**IHO Definition** :Medium Fracture (>200m to 500m wide)

5) 05

**IHO Definition** :Large Fracture (>500m wide)

**Remarks :**

## 5.13 Ice Keel Concentration

**Table 5-13**

**IHO Definition** : ICEKCN describes the concentration of ice keels beneath an ice area.

**Attribute Type** : enumeration

1) 01

**IHO Definition** :0/10 – 1/10

10) 10

**IHO Definition** :1/10

12) 12

**IHO Definition** :1/10 – 2/10

**IHO Definition :** The Ice Lead Status indicates the surface nature of the lead.

**Attribute Type :** enumeration

1) 01

**IHO Definition :**Open Lead

2) 02

**IHO Definition :**Frozen Lead

99) 99

**IHO Definition :**Undetermined/Unknown

**Remarks :**

## 5.18 Ice Lead (or Fracture or Crack) Width

**Table 5-18**

**IHO Definition :** ICELWD indicates the width of a lead or fracture or crack in metres.

**Attribute Type :** integer

**Remarks :**

## 5.19 Ice Location Information

**Table 5-19**

**IHO Definition :** ICELOC indicates whether the break is at a specific location, or whether there is a presence in the area.

**Attribute Type :** enumeration

1) 01

**IHO Definition :**Specific Location

2) 02

**IHO Definition :**Presence in Area

**Remarks :**

## 5.20 Ice Rafting Concentration

**Table 5-20**

**IHO Definition :** ICEFCN describes the concentration of ice rafting in an ice area.

**Attribute Type :** enumeration

**IHO Definition** :New Lake Ice (<5cms)

2) 02

**IHO Definition** :Thin Lake Ice (5-<15cms)

3) 03

**IHO Definition** :Medium Lake Ice (15-<30cms)

4) 04

**IHO Definition** :Thick Lake Ice (30-70cms)

5) 05

**IHO Definition** :Very Thick Lake Ice (>70cms)

70) 70

**IHO Definition** :Brash Ice

99) 99

**IHO Definition** :Undetermined/Unknown

**Remarks** :

## 5.28 Level Ice

**Table 5-28**

**IHO Definition** : ICELVL is an indication as to whether or not the ice has been affected by deformation

**Attribute Type** : enumeration

1) 01

**IHO Definition** :Level(undeformed)

2) 02

**IHO Definition** :Deformed

99) 99

**IHO Definition** :Undetermined/Unknown

**Remarks** :

## 5.29 Maximum Height of Above Water Part (iceberg/grounded hummock)

**Table 5-29**

**IHO Definition** : IA\_BUF specifies the maximum height of an iceberg above the waterline in meters.

**Attribute Type** : integer

**Remarks** :

### 5.30 Maximum Ice Thickness

Table 5-30

**IHO Definition :** ICEMAX specifies the maximum thickness of the ice.

**Attribute Type :** integer

**Remarks :**

### 5.31 Maximum Width of Ice Lead (or Fracture or Crack)

Table 5-31

**IHO Definition :** IA\_DXW defines the maximum width of the lead or fracture or crack.

**Attribute Type :** integer

**Remarks :**

### 5.32 Minimum Width of Ice Lead (or Fracture or Crack)

Table 5-32

**IHO Definition :** IA\_DMW defines the minimum width of the lead or fracture or crack.

**Attribute Type :** integer

**Remarks :**

### 5.33 Number of Icebergs in Area

Table 5-33

**IHO Definition :** ICEBNM indicates the number of Icebergs within a specified area.

**Attribute Type :** integer

**Remarks :**

### 5.34 Number of Ice Objects

Table 5-34

**IHO Definition :** IA\_OBN defines the number of ice objects (cracks, leads, fractures, icebergs).

**Attribute Type :** integer

**Remarks :**

### 5.35 Partial Concentration

Table 5-35

**IHO Definition :** ICEAPC specifies the partial concentrations of ice in an area. ('Ca, Cband Cc').

**Attribute Type :** enumeration

1) 01

**IHO Definition :** Ice Free

2) 02

**IHO Definition :** Open Water ( < 1/10 ice)

3) 03

**IHO Definition :** Bergy Water

**IHO Definition** :Undetermined/Unknown  
**Remarks** :

### 5.36 Prevailing Iceberg Form

**Table 5-36**

**IHO Definition** : IA\_BFM specifies the prevailing form of icebergs in an area.  
**Attribute Type** : enumeration  
 1) 01

**IHO Definition** :Domed  
 2) 02  
**IHO Definition** :Tabular  
 3) 03

**IHO Definition** :Undetermined/Unknown  
**Remarks** :

### 5.37 Snow Cover Concentration

Table 5-37

**IHO Definition** : ICESCN indicates the concentration (aerial coverage) of snow in tenths.  
**Attribute Type** : enumeration  
 1) 01  
**IHO Definition** :1/10  
 2) 02  
**IHO Definition** :2/10  
 3) 03

 99) 99  
**IHO Definition** :Undetermined/Unknown  
**Remarks** :

### 5.38 Snow Depth

Table 5-38

**IHO Definition** : ICESCT specifies the depth of snow cover on the ice.  
**Attribute Type** : integer  
**Remarks** :

## 5.39 Total Concentration

Table 5-39

**IHO Definition :** ICEACT specifies the total concentration of ice in an area. It represents the ratio expressed in tenths describing the total area of the water surface covered by ice as a fraction of the whole area.

**Attribute Type :** enumeration

1) 01

**IHO Definition :**Ice Free

2) 02

**IHO Definition :**Open Water ( < 1/10 ice)

3) 03

**IHO Definition :**Bergy Water

10) 10

**IHO Definition :**1/10 ice
