1 Overview

This document has been produced by the BSH as part of JCOMM/ETSI in response to a requirement to produce an ice data product that can be used within Electronic Chart Display and Information Systems.

1.1 Introduction

The Ice Information product specification is based on the IHO S-100 framework specification, Geography Markup Language (GML) Encoding Standard and the ISO 19100 series of standards. It is a vector product specification that is primarily intended for encoding the extent and nature of Sea Ice for navigational purpose.

1.2 References

- S-100 IHO Universal Hydrographic Data Model
- GML OpenGIS® Geography Markup Language (GML) Encoding Standard (Version 3.2.1)

1.3 Terms, definitions and abbreviations

1.3.1 Use of Language

- “Must” indicates a mandatory requirement.
- “Should” indicates an optional requirement, that is the recommended process to be followed, but is not mandatory.
- “May” means “allowed to” or “could possibly”, and is not mandatory.

1.3.2 Terms and Definitions

1.3.3 Abbreviation

CRS	Coordinate Reference System
ECDIS	Electronic Chart Display Information System
EPSG	European Petroleum Survey Group
ENC	Electronic Navigational Chart
IHO	International Hydrographic Organization
IMO	International Maritime Organization 
ISO	International Organization for Standardization
GML	Geography Markup Language
ETSI	Expert Team on Sea Ice

1.4 General Data Product Description

Title:	Ice Information
Abstract:	Ice information for ship navigation
Content:	Ice features as vector data
Spatial Extent:	
	Description:
	East Bounding Longitude: -180 
	West Bounding Longitude: 180
	North Bounding Latitude: 90
	South Bounding Latitude: -90
Purpose:	Navigation in ice covered regions

1.5 Data product specification metadata

Title:	Ice Information Product Specification
S-100 Version:	1.0.0
S-411 Version:	1.0.0
Date:	28.02.2013
Language:	English
Contact:	Jürgen Hólfort (ice@bsh.de)
Identifier:	JCOMM S-411
Maintenance:	Changes to this product specification are coordinated by ETSI.

1.5.1 Product Specification Maintenance

1.5.1.1 Introduction

Changes to JCOMM S-411 will be released by the IHO as a new edition, revision, or clarification.

1.5.1.2 New Edition

New Editions of S-10n introduce significant changes. New Editions enable new concepts, such as the ability to support new functions or applications, or the introduction of new constructs or data types. New Editions are likely to have a significant impact on either existing users or future users of S-10n.

1.5.1.3 Revisions

Revisions are defined as substantive semantic changes to S-10n. Typically, revisions will change S-10n to correct factual errors; introduce necessary changes that have become evident as a result of practical experience or changing circumstances. A revision must not be classified as a clarification. Revisions could have an impact on either existing users or future users of S-10n. All cumulative clarifications must be included with the release of approved corrections revisions. Changes in a revision are minor and ensure backward compatibility with the previous versions within the same Edition. Newer revisions, for example, introduce new features and attributes. Within the same Edition, a dataset of one version could always be processed with a later version of the feature and portrayal catalogues. In most cases a new feature or portrayal catalogue will result in a revision of S-10n.

1.5.1.4 Clarification

Clarifications are non-substantive changes to S-10n. Typically, clarifications: remove ambiguity; correct grammatical and spelling errors; amend or update cross references; insert improved graphics in spelling, punctuation and grammar. A clarification must not cause any substantive semantic change to S-10n. Changes in a clarification are minor and ensure backward compatibility with the previous versions within the same Edition. Within the same Edition, a dataset of one clarification version could always be processed with a later version of the feature and portrayal catalogues, and a portrayal catalogue can always rely on earlier versions of the feature catalogues. Changes in a clarification are minor and ensure backward compatibility with the previous versions

1.5.1.5 Version Numbers

The associated version control numbering to identify changes (n) to S-10n must be as follows:

New Editions denoted as n.0.0

Revisions denoted as n.n.0

Clarifications denoted as n.n.n

2 Specification Scopes

2.1 General Scope

Scope Identification:	JCOMM S-411 dataset
Hierarchical Level:	MD_ScopeCode -005
Hierarchical Level Name:	dataset
Extent:	EX_GeographicExtent -Global coverage of maritime areas. EX_TemporalExtent -Not defined for this product specification. EX_VerticalExtent-Not defined for this product specification.

3 Data Product Identification

Title:	Ice Information
Abstract:	Ice Information for navigation in ice covered regions
Topic Category:	transportation, climatologyMeteorologyAtmosphere 
Geographic Description:	Ice covered regions
Spatial Resolution:	---
Purpose:	Navigation in ice covered regions
Language:	English (optional additional)
Classification:	Unclassified
Spatial Representation Type:	vector
Point of Contact:	Producing Agency
Use Limitation:	---

4 Data Content and Structure

4.1 Introduction

The application schema of ice information product contains 28 feature types with their attributes, enumerations etc. It is based on the ice objects catalogue (Version 5.1) and can also be found in the ICE domain of the IHO Registry. Because of this it is not possible to describe full schema in suitable form in this specification. The full schema can be found as XML Schema File in Annex B – Data Product format (encoding).

4.2 Application Schema

Picture below shows very simplified structure of ice data structure

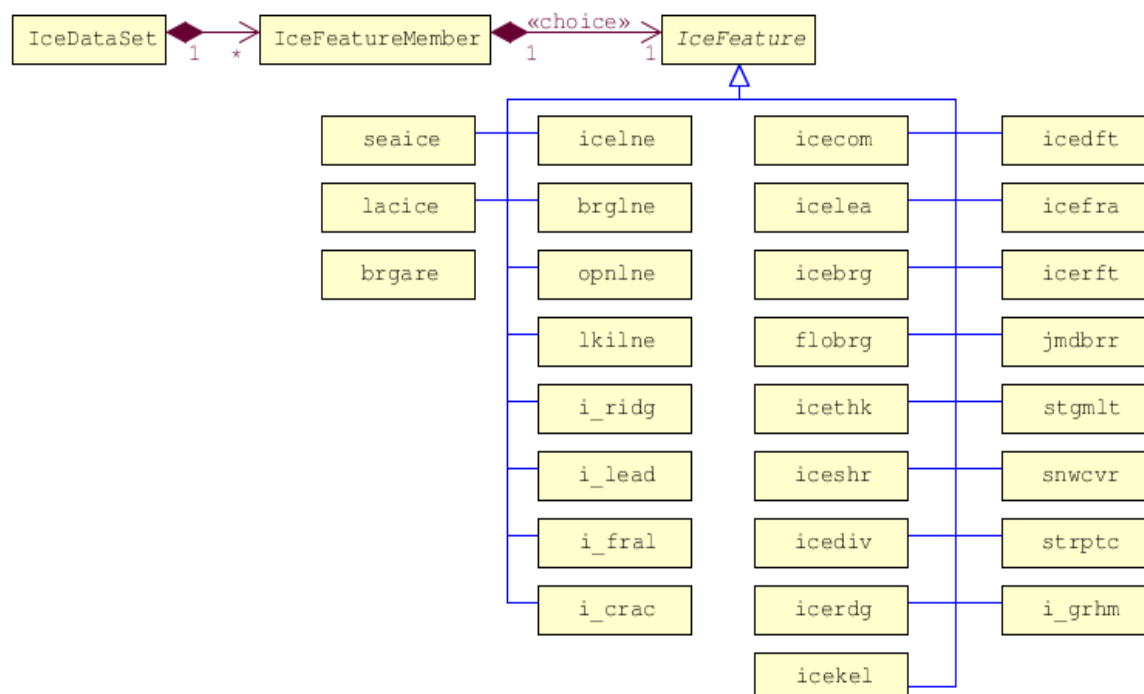

Figure 1: Ice Data Product – Structure

General GML (XML) representation:

```

<?xml version="1.0" encoding="UTF-8"?>
<ice:IceDataSet xmlns:ice="http://www.iho.int/ice"
  xmlns:gml="http://www.opengis.net/gml/3.2">
  <ice:IceFeatureMember>
    <ice:seaice>
      <ice:iceact> ... </ice:iceact>
      .
      .
      <gml:Polygon srsName="...">... </gml:Polygon>
    </ice:seaice>
  </ice:IceMember>
  <ice:IceMember>
    <ice:i_ridg>
      <ice:icerdv> ... </ice:icerdv>
    
```

```

      .
      .
      <gml:LineString srsName="...">... </gml:LineString>
    </ice:i_ridg>
  </ice:IceMember>
<ice:IceMember>
  <ice:icebrg>
    <ice:icebsz> ... </ice:icebsz>
    .
    .
    <gml:Point srsName="...">... </gml:Point>
  </ice:icebrg>
</ice:IceFeatureMember>

```

4.3 Feature Catalogue

4.3.1 Introduction

The feature Catalogue for Ice Information contains only geographic features. The ice features which can be used in ECDIS are fully presented in the ICE domain of the IHO Registry.

4.3.2 Application Schema Elements, Named Types

4.3.2.1 Ice Application Schema Types Overview

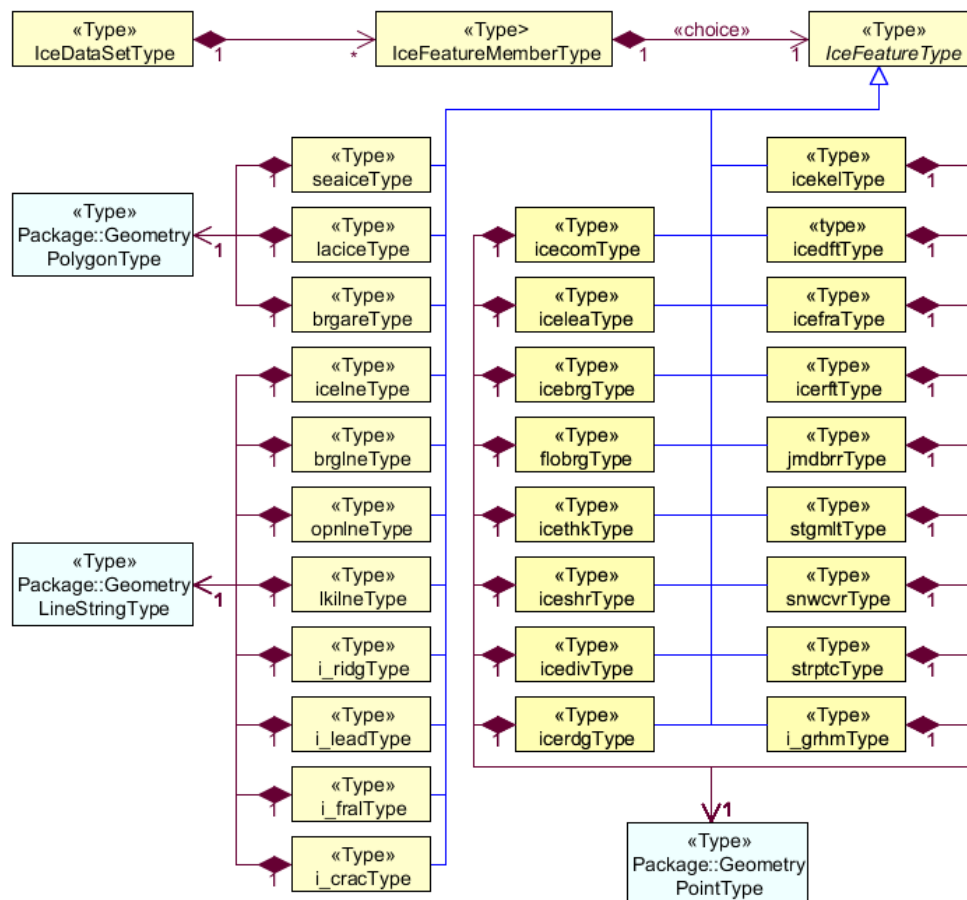

Figure 2: Ice App Schema Types

4.3.2.2 IceDataSet / Types

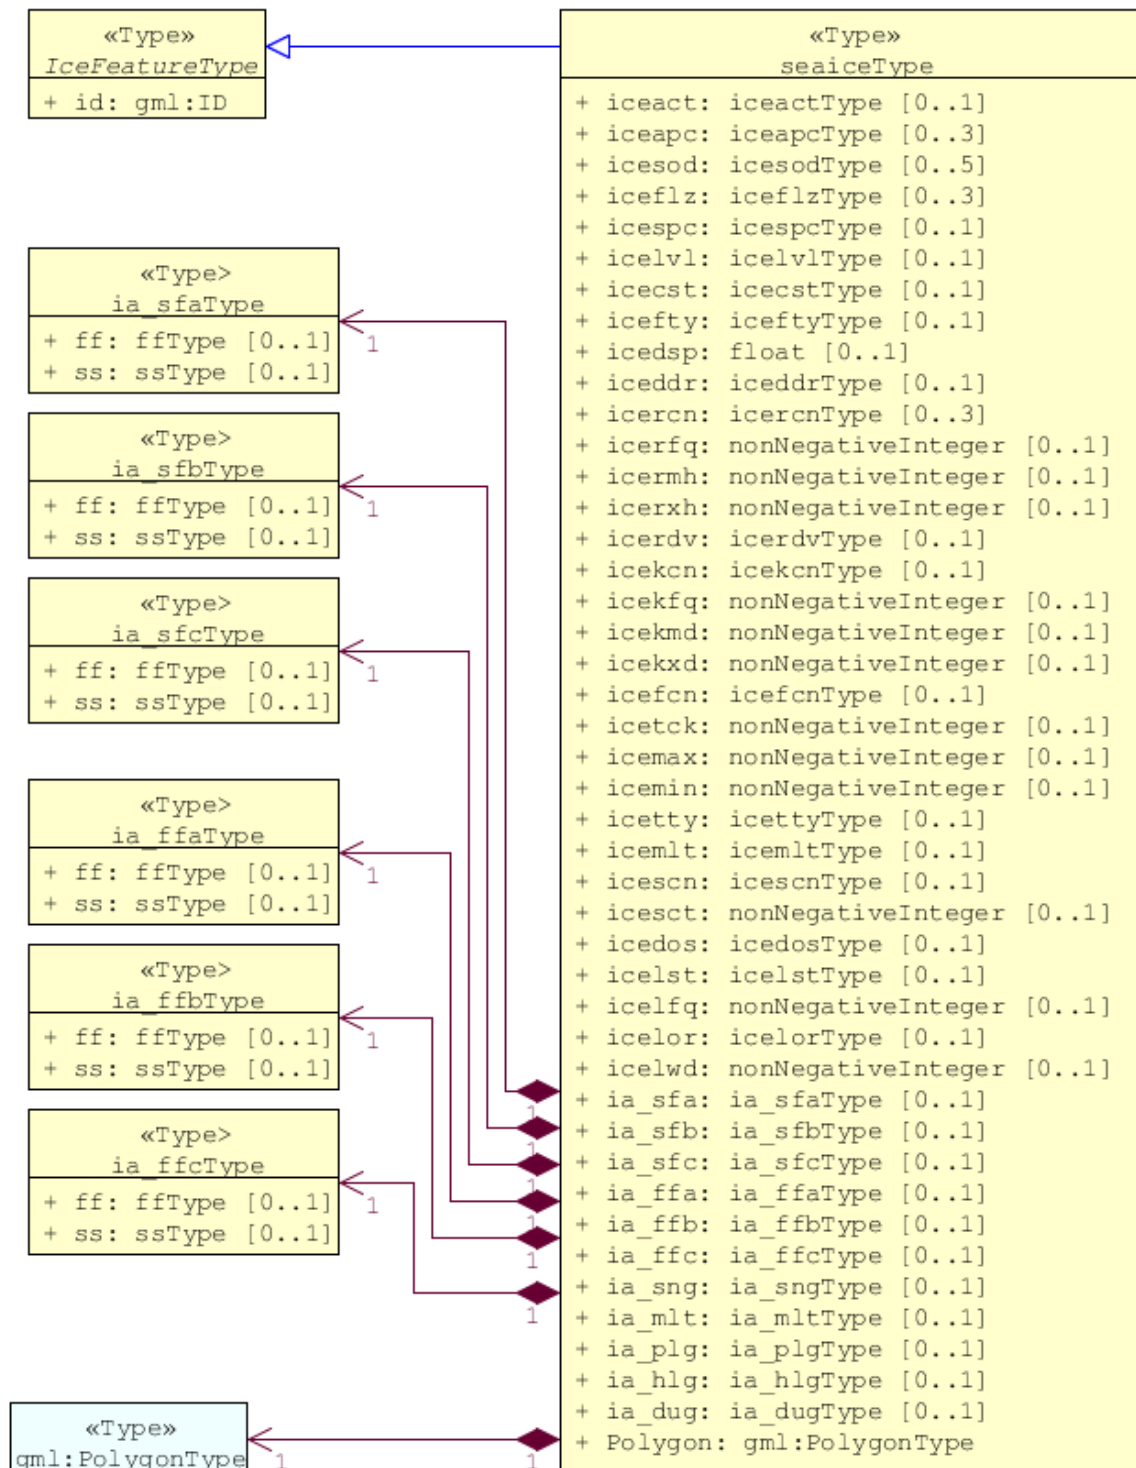

4.3.2.2.1 IceDataSetType

IceDataSetType is a type of root Element of an ice information data set.

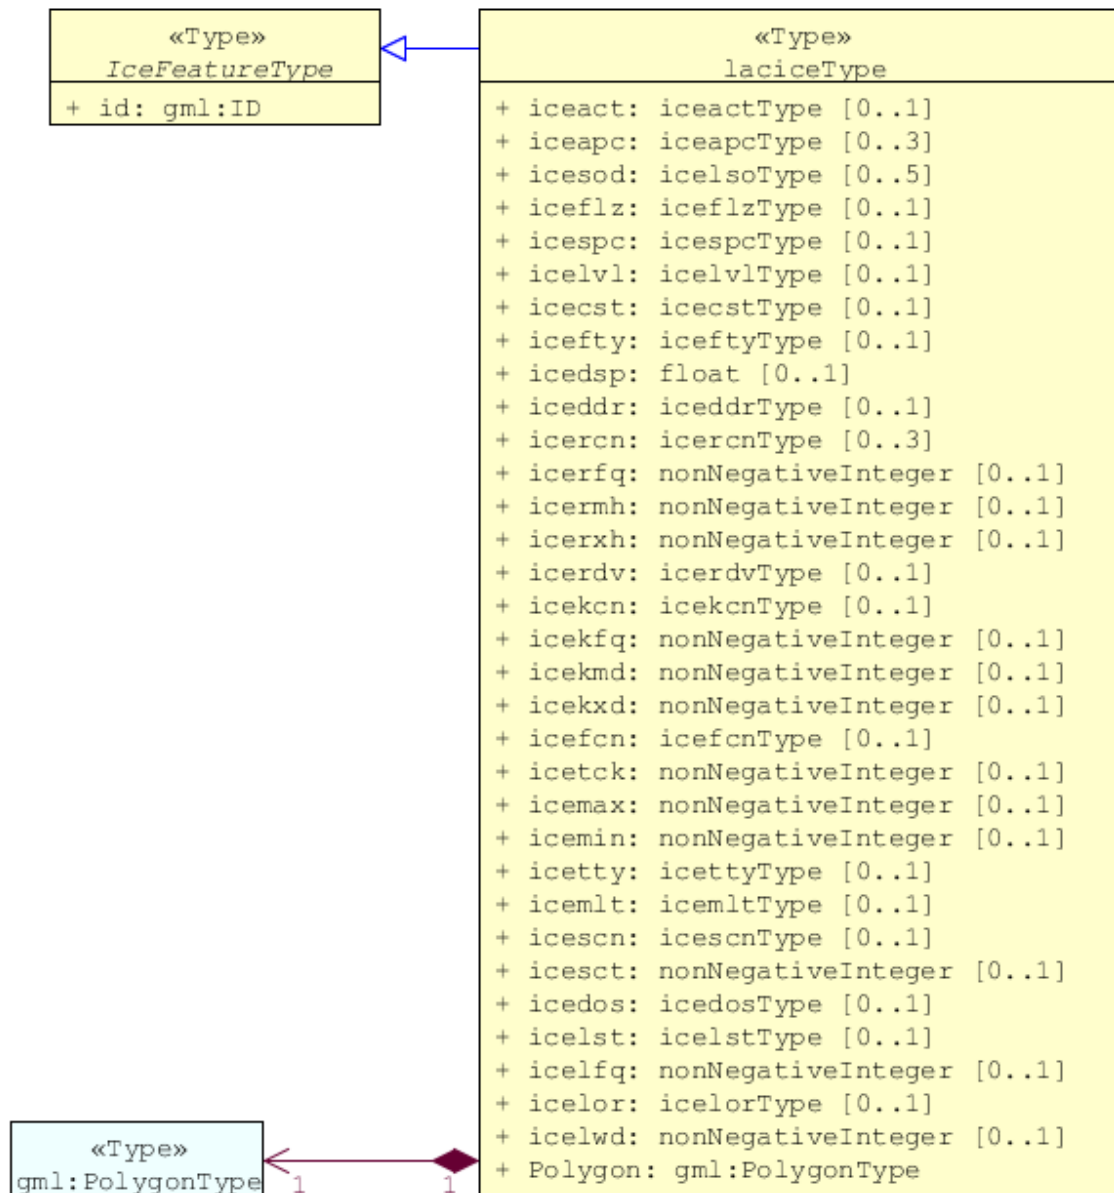

Ice Data Set contains an unlimited number of *Ice Feature Members*, each *Ice Feature Member* contains one *Ice Feature* (seaice, lacice, iceberg, etc.).

4.3.2.3 seaiceType (Sea Ice)

4.3.2.4 laciceType - Lake Ice

4.3.2.5 brgareType - Iceberg Area**4.3.2.6 icelneType - Ice Edge****4.3.2.7 brglneType - Iceberg Limit****4.3.2.8 opnlneType - Limit of Open Water****4.3.2.9 lkilneType - Limit of All Known Ice**

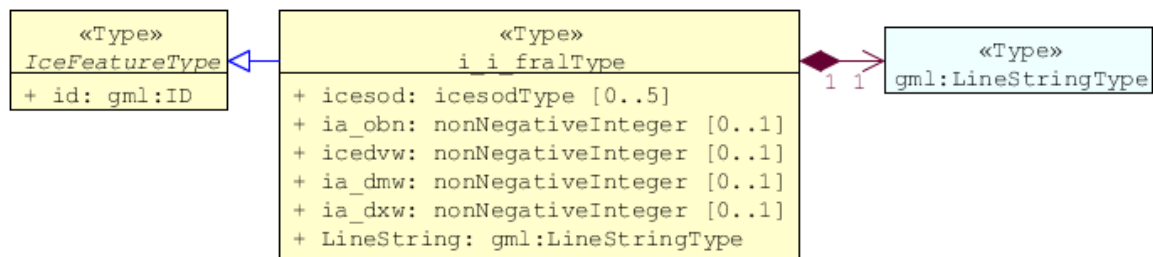

4.3.2.10 i_ridgType - Line of Ice Ridge

4.3.2.11 i_leadType - Line of Ice Lead

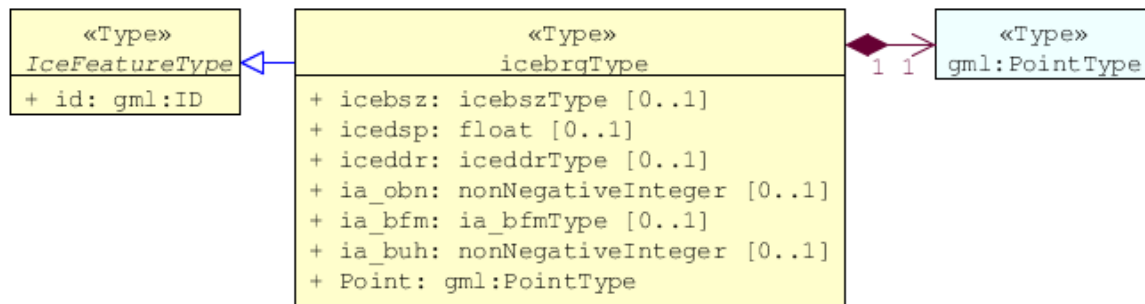

4.3.2.12 i_fralType - Line of Ice Fracture

4.3.2.13 i_cracType - Line of Ice Crack

4.3.2.14 icecomType – Ice Compacting**4.3.2.15 iceleaType – Ice Lead****4.3.2.16 icebrgType – Iceberg****4.3.2.17 flobrgType – Floeberg**

4.3.2.18 icethkType – Ice Thickness

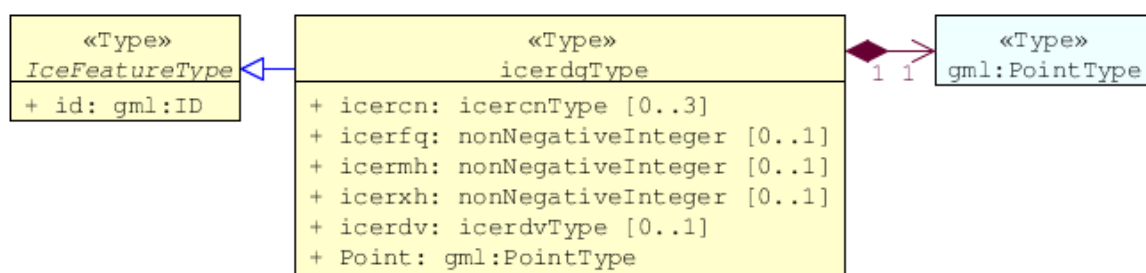

4.3.2.19 iceshrType – Ice Shear

4.3.2.20 icedivType – Ice Divergence

4.3.2.21 icerdgType – Ice Ridge/Hummock

4.3.2.22 icekelType – Ice Keel/Bummock**4.3.2.23 icedftType – Ice Drift****4.3.2.24 icefraType – Ice Fracture****4.3.2.25 icerftType – Ice Rafting**

4.3.2.26 jmdbrType – Jammed Brash Barrier

4.3.2.27 stgmltType – Stage of Melt

4.3.2.28 snwcvrType – Snow Cover

4.3.2.29 strptcType – Strips and Patches

4.3.2.30 i_grhmType – Grounded Hummock

4.3.3 Feature Types Summary

Table 1: Summary of Types

Register Dictionary	Index	Alpha code	Name
IceFCD	Feature	SEAICE	Sea Ice
IceFCD	Feature	LACICE	Lake Ice
IceFCD	Feature	BRGARE	Iceberg Area
IceFCD	Feature	ICELNE	Ice Edge
IceFCD	Feature	BRGLNE	Iceberg Limit
IceFCD	Feature	OPNLNE	Limit of Open Water
IceFCD	Feature	LKILNE	Limit of All Known Ice
IceFCD	Feature	I RIDG	Line of Ice Ridge
IceFCD	Feature	I LEAD	Line of Ice Lead
IceFCD	Feature	I FRAL	Line of Ice Fracture
IceFCD	Feature	I CRAC	Line of Ice Crack
IceFCD	Feature	ICECOM	Ice Compacting
IceFCD	Feature	ICELEA	Ice Lead
IceFCD	Feature	ICEBRG	Iceberg
IceFCD	Feature	FLOBRG	Floeberg
IceFCD	Feature	ICETHK	Ice Thickness
IceFCD	Feature	ICESHR	Ice Shear
IceFCD	Feature	ICEDIV	Ice Divergence
IceFCD	Feature	ICERDG	Ice Ridge/Hummock
IceFCD	Feature	ICEKEL	Ice Keel/Hummock
IceFCD	Feature	ICEDFT	Ice Drift
IceFCD	Feature	ICEFRA	Ice Fracture
IceFCD	Feature	ICERFT	Ice Rafting
IceFCD	Feature	JMDBRR	Jammed Brash Barrier
IceFCD	Feature	STGMLT	Stage of Melt
IceFCD	Feature	SNWCVR	Snow Cover
IceFCD	Feature	STRPTC	Strips and Patches
IceFCD	Feature	I GRHM	Grounded Hummock
IceFCD	Attribute	ICEACT	Total Concentration
IceFCD	Attribute	ICEAPC	Partial Concentration
IceFCD	Attribute	ICESOD	Ice Stage of Development
IceFCD	Attribute	ICELSO	Lake Ice Stage of Development
IceFCD	Attribute	ICEFLZ	Floe Sizes
IceFCD	Attribute	ICEMLT	Melt Stage
IceFCD	Attribute	ICESPC	Concentration of Strips and Patches
IceFCD	Attribute	ICEBNM	Number of Icebergs in Area
IceFCD	Attribute	ICELVL	Level Ice
IceFCD	Attribute	ICECST	Compacting Strength
IceFCD	Attribute	ICEFTY	Ice Fracture Type
IceFCD	Attribute	ICELST	Ice Lead Status
IceFCD	Attribute	ICELFQ	Frequency of Leads or Fractures
IceFCD	Attribute	ICELOR	Orientation of Leads or Fractures
IceFCD	Attribute	ICELWD	Ice Lead (or Fracture or Crack) Width
IceFCD	Attribute	ICELOC	Ice Location Information
IceFCD	Attribute	ICEBSZ	Iceberg Size

Register Dictionary	Index	Alpha code	Name
IceFCD	Attribute	ICEDDR	Ice Drift Direction
IceFCD	Attribute	ICEDSP	Ice Drift Speed
IceFCD	Attribute	ICETCK	Ice Average Thickness
IceFCD	Attribute	ICEMAX	Maximum Ice Thickness
IceFCD	Attribute	ICEMIN	Minimum Ice Thickness
IceFCD	Attribute	ICETTY	Ice Thickness Type
IceFCD	Attribute	ICESCT	Snow Depth
IceFCD	Attribute	ICESCN	Snow Cover Concentration
IceFCD	Attribute	ICEDOS	Direction Of Sastrugi
IceFCD	Attribute	ICERCN	Ice Ridge Concentration
IceFCD	Attribute	ICERDV	Ice Ridge Classification
IceFCD	Attribute	ICERMH	Ice Ridge Mean Height
IceFCD	Attribute	ICERFQ	Ice Ridge Frequency
IceFCD	Attribute	ICERXH	Ice Ridge Maximum Height
IceFCD	Attribute	ICEKCN	Ice Keel Concentration
IceFCD	Attribute	ICEKFQ	Ice Keel Frequency
IceFCD	Attribute	ICEKMD	Ice Keel Mean Depth
IceFCD	Attribute	ICEKXD	Ice Keel Maximum Depth
IceFCD	Attribute	ICEFCN	Ice Rafting Concentration
IceFCD	Attribute	IA_SFA	Ice Stage of Development and Floe Size for the 1 st p.c.
IceFCD	Attribute	IA_SFB	Ice Stage of Development and Floe Size for the 2 nd p.c.
IceFCD	Attribute	IA_SFC	Ice Stage of Development and Floe Size for the 3 rd p.c.
IceFCD	Attribute	IA_FFA	Ice Breccia for the 1 st partial concentration
IceFCD	Attribute	IA_FFB	Ice Breccia for the 2 nd partial concentration
IceFCD	Attribute	IA_FFC	Ice Breccia for the 3 rd partial concentration
IceFCD	Attribute	IA_SNG	Snow concentration
IceFCD	Attribute	IA_MLT	Stage of melting
IceFCD	Attribute	IA_PLG	Contamination
IceFCD	Attribute	IA_HLG	Hills concentration
IceFCD	Attribute	IA_DUG	Fractures concentration
IceFCD	Attribute	IA_BCN	Icebergs concentration
IceFCD	Attribute	IA_BFM	Prevailing iceberg form
IceFCD	Attribute	IA_BUH	Max. height of the above-water part (iceberg / grounded hummock)
IceFCD	Attribute	IA_OBN	Number of ice objects
IceFCD	Attribute	IA_DXW	Max. width of ice lead (or fracture or crack)
IceFCD	Attribute	IA_DMW	Min. width of ice lead (or fracture or crack)
IceFCD	Attribute	ICEBRS	Brash Ice

4.4 Dataset Types

4.4.1 Introduction

At the moment is only one type of dataset supported. This is GML(XML) encoded ice feature collections.

4.5 Geometry

Ice Information datasets use S-100 Level 3a geometry which supports 0-, 1-, and 2-dimensional objects (points, line strings, and polygons).

Figure 3: Geometric Primitives in Ice Information Product

There are three types of geometry: Point, Line String and Polygon. Multi-geometries will be not supported. The standard geometries of GML where redefined for S-411. The reason for this is to reduce file sizes. It is only possible to use "posList" with blanks separated coordinate values, like

```
<gml:posList>-73.991 40.736 -73.991 40.736</gml:posList>
```

For standard GML it would be also possible to use following (**DO NOT USE THIS**):

```
<gml:posList>
  <pos>-73.991 40.736</pos>
  <pos>-73.991 40.736</pos>
</gml:posList>
```

Which means much more chars in the file and growing of file size.

All multi-geometries must be splitted into single geometries. Encoding for geometry is GML:

Point encoding example:

```
<gml:Point>
  <gml:pos>147.291 -42.851</gml:pos>
</gml:Point>
```

Line String encoding example:

```
<gml:LineString>
  <gml:posList>-73.991 40.736 -73.991 40.736</gml:posList>
</gml:LineString>
```

Polygon encoding example:

```
<gml:Polygon>
  <gml:exterior>
    <gml:LinearRing>
      <gml:posList>
        22.546 62.391 25.033 62.404 24.995 60.182 22.483
        60.169 22.546 62.391
      </gml:posList>
    </gml:LinearRing>
  </gml:exterior>
  <gml:interior>
    <gml:LinearRing>
      <gml:posList>

        61.621 23.227 61.811
      </gml:posList>
    </gml:LinearRing>
  </gml:interior>
</gml:Polygon>
```

5 Coordinate Reference Systems (CRS)

For exchange of ice data WGS84 (EPSG: 4326) must be used.

6 Data Quality

As ice charts are done for different purposes (from weekly overview to tactical charts and further to model forecasts) data quality can differ. Differences can also be found between ice charts of the same region and same nominal date resulting from different issuing agencies or also from different forecasts models. Further information can be found in the WMO publication 574.

7 Data Capture and Classification

The data will be captured normally from satellite data. The extraction and classification will be done by ice analysts. In some areas of the world (e.g. the Baltic Sea) in addition also some direct shore and ship based observations and textual ice reports from ice authorities will be used. Further information can be found in the WMO publication 574 in Appendix A.

8 Data Product format (encoding)

8.1 Introduction

This clause describes encoding rules for S-100 base ice datasets. For the encoding of ice datasets GML 3.2.1 was used.

8.2 Encoding Rules

8.2.1 Longitude / Latitude

- Longitude and latitude must be encoded in decimal degrees, e.g. : 12.567 56.765
- Number of decimals is not limited, but it should be as less as possible for minimizing of file size, normally 3 or even 2 digits are enough

8.2.2 Elements and attributes

- Names of elements representing ice features or attributes (from IceFDC dictionary see Table 1: Summary of Types) must be encoded with lower case letters
- Names of elements representing features or attributes from other dictionaries must be encoded with upper case letters
- Character Set is UTF-8
- Elements or attributes may be empty, but it should be eliminated for minimizing of file size

8.3 Encoding Examples

Below there are three examples of the encoding of various ice features using different geometric primitives, the encoding of other ice objects can be done in a similar way.

8.3.1 Polygon Feature

```
<ice:IceFeatureMember>
  <ice:brgare gml:id="brgare.1">
    <ice:icebnn/>
    <ice:icesbz/>
    <ice:ia_bcn/>
    <ice:ia_bfm/>
    <ice:ia_buh/>
    <gml:Polygon srsName="http://www.opengis.net/gml/srs/epsg.xml#4326">
      <gml:exterior>
        <gml:LinearRing>
          <gml:posList>
            22.546 62.391 25.033 62.404 24.995 60.182 22.483 60.169 22.546 62.391
          </gml:posList>
        </gml:LinearRing>
      </gml:exterior>
      <gml:interior>
        <gml:LinearRing>
          <gml:posList>
            23.227 61.811 23.467 61.306 24.023 61.621 24.035 61.621 23.227 61.811
          </gml:posList>
        </gml:LinearRing>
      </gml:interior>
    </gml:Polygon>
  </ice:brgare>
</ice:IceFeatureMember>
```

8.3.2 LineString Feature

```

      <gml:pos>147.291 -42.851</gml:pos>
    </gml:Point>
  </ice:icecom>
</ice:IceFeatureMember>

```

9 Data Product Delivery

9.1 Introduction

Ice Information Product will be delivered as Exchange Set, containing dataset itself, metadata, etc. It is also possible that several charts are available for an area. The decision, which one to use, is within the responsibility of the navigator on the vessel.

9.2 Exchange Set

The exchange set for the Ice Information Product has following structure:

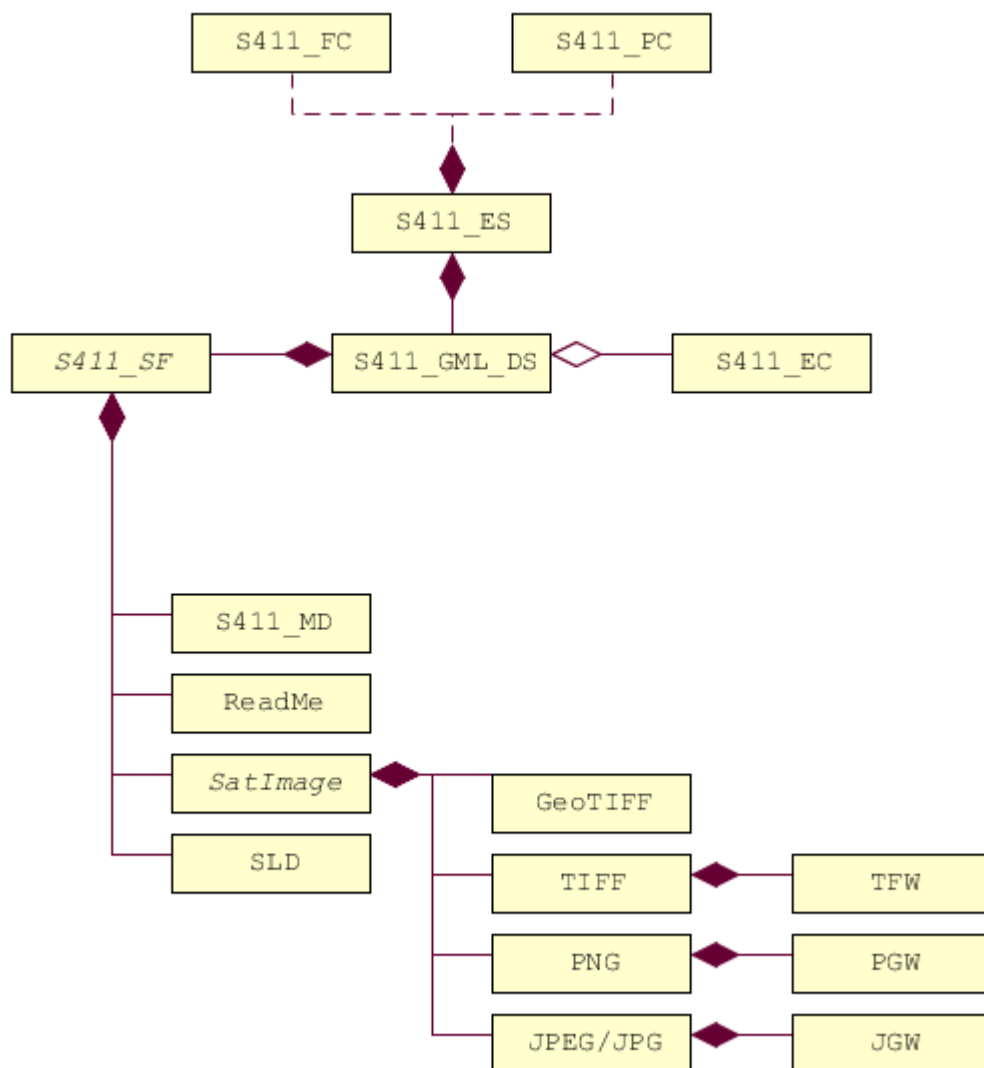

Figure 4: Exchange Set Structure

9.2.1 Exchange Set Naming

Name of Exchange Set has following structure:

S411_ProducerCode_DatasetNameWithoutEnding

Example: S411_BSH_ek1-20130305-17

An exchange Set can be a simple data folder, but it is recommended to zip this folder for minimizing file size. In this case name of Exchange Set looks like:

S411_ProducerCode_DatasetNameWithoutEnding.zip

Example: S411_BSH_ek1-20130305-17.zip

or if .tar.gz compressing algorithm is in use:

S411_ProducerCode_DatasetNameWithoutEnding.tar.gz

Example: S411_BSH_ek1-20130305-17.tar.gz

9.3 Dataset

9.3.1 Dataset Naming

The data producer are free to choose file name for data set. The ending or postfix must be "*.gml".

Example: ek1-20130305-17.gml

9.4 Support Files

9.4.1 Support File Naming

There are no restrictions for support file naming. But it is important to describe the files in the exchange catalogue file.

9.4.1.1 ISO Metadata File

The metadata for Dataset based on ISO 19139/19115, is also official S-100 Metadata with mandatory file identifier. (See Chapter 10)

9.4.1.2 Portrayal, Symbology

The portrayal (display instructions) should be a part of system, installed on board. But as option display instructions could be a part of exchange set, that means the display instruction xml file and svg symbols can be delivered within the exchange set as support files.

9.4.1.3 SVG Graphics

9.4.1.4 Readme

9.5 Exchange Catalogue

9.5.1 Exchange Catalogue Naming

Name of Exchange Catalogue is

CATALOG_ICB

10 Metadata

10.1 Introduction

There are two kinds of metadata to prepare:

- **ISO 19139 Metadata**
This kind of metadata implementation can be read by broad range of software.
- **S100 Metadata**
The S100 metadata are for describing the structure of Exchange Catalogue

10.1.1 ISO 19139 Metadata

For the description of ice data following metadata are necessary:

Element Name	Description	Namespace
MD_Metadata	root element	gmd
fileIdentifier	Id for dataset	gmd
language	Product language	gmd
characterSet	Used character set	gmd
contact	Contact data	gmd
dateStamp	date of publishing	gmd
identificationInfo	Specific info about product	gmd

```

<?xml version="1.0" encoding="UTF-8"?>
<gmd:MD_Metadata xmlns:gmd="http://www.isotc211.org/2005/gmd"
  xmlns:gco="http://www.isotc211.org/2005/gco"
  xmlns:gml="http://www.opengis.net/gml/3.2">
  <gmd:fileIdentifier> ... </gmd:fileIdentifier>
  <gmd:language> ... </gmd:language>
  <gmd:characterSet> ... </gmd:characterSet>
  <gmd:contact> ... </gmd:contact>
  <gmd:dateStamp> ... </gmd:dateStamp>
  <gmd:identificationInfo> ... </gmd:identificationInfo>
</gmd:MD_Metadata>
  
```

10.1.1.1 fileIdentifier

Element Name	Description	Namespace
fileIdentifier	Id for dataset	gmd
CharacterString	String contained id value	gco

```

<gmd:fileIdentifier>
  <gco:CharacterString>bsh_ek1-20130114-08</gco:CharacterString>
</gmd:fileIdentifier>
  
```

10.1.1.2 language

Element Name	Description	Namespace
language	Language of dataset	gmd
LanguageCode	Code for language	gmd

LanguageCode element contains two attributes:

- **codeList:** Link to the list containing the codes for languages
- **codeListValue** value from the list defining the used language

```
<gmd:language>
  <gmd:LanguageCode
    codeList="http://www.isotc211.org/2005/resources/CodeList/ML_gmxCodeLists.xml#LanguageCode"
    codeListValue="eng">English</gmd:LanguageCode>
</gmd:language>
```

10.1.1.3 characterSet

Element Name	Description	Namespace
characterSet	characterSet of dataset	gmd
MD_CharacterSetCode	Code for characterSet	gmd

MD_CharacterSetCode element contains two attributes:

- **codeList:** Link to the list containing the codes for character set
- **codeListValue** value from the list defining the used character set

```
<gmd:characterSet>
  <gmd:MD_CharacterSetCode
    codeList="http://www.isotc211.org/2005/resources/CodeList/ML_gmxCodeLists.xml#MD_CharacterSetCode"
    codeListValue="utf8">UTF 8</gmd:MD_CharacterSetCode>
</gmd:characterSet>
```

10.1.1.4 contact

Element Name	Description	Namespace
contact	Contact for questions to dataset	gmd
CI_ResponsibleParty	ISO Element for contact data	gmd
individualName	Name of responsible person	gmd
CharacterString	individualName value (text)	gco
organisationName	Name of responsible organisation	gmd
CharacterString	organisationName value (text)	gco
contactInfo	Contact information	gmd
CI_Contact	ISO Element for contact information	gmd
phone	phone	gmd
CI_Telephone		gmd
voice		gmd
CharacterString	Voice telephone value (text)	gco
facsimile		gmd
CharacterString	Fax number value (text)	gco
address		gmd
CI_Address		gmd
deliveryPoint		gmd
CharacterString	Postal Address (street, house number)	gco
city		gmd
CharacterString	City name value (text)	gco
administrativeArea		gmd
CharacterString	Administrative Area name value (text)	gco
postalCode		gmd
CharacterString		gco
electronicMailAddress		gmd
CharacterString	Email value (text)	gco
role		gmd
CI_RoleCode		gmd

CI_RoleCode element contains two attributes

- **codeList:** Link to the list containing the codes for roles
- **codeListValue** value from the list defining the used roles

```

<gmd:contact>
  <gmd:CI_ResponsibleParty>
    <gmd:individualName>
      <gco:CharacterString>Jürgen Holfort</gco:CharacterString>
    </gmd:individualName>
    <gmd:organisationName>
      <gco:CharacterString>FMHA Germany (BSH)</gco:CharacterString>
    </gmd:organisationName>
    <gmd:contactInfo>
      <gmd:CI_Contact>
        <gmd:phone>
          <gmd:CI_Telephone>
            <gmd:voice>
              <gco:CharacterString>+49 (0) 381 4563-782</gco:CharacterString>
            </gmd:voice>
            <gmd:facsimile>
              <gco:CharacterString>+49 (0) 381 4563-949</gco:CharacterString>
            </gmd:facsimile>
          </gmd:CI_Telephone>
        </gmd:phone>
        <gmd:address>
          <gmd:CI_Address>
            <gmd:deliveryPoint>
              <gco:CharacterString>Neptunallee 5</gco:CharacterString>
            </gmd:deliveryPoint>
            <gmd:administrativeArea>
              <gco:CharacterString>Rostock</gco:CharacterString>
            </gmd:administrativeArea>
            <gmd:postalCode>
              <gco:CharacterString>18057</gco:CharacterString>
            </gmd:postalCode>
            <gmd:electronicMailAddress>
              <gco:CharacterString>ice@bsh.de</gco:CharacterString>
            </gmd:electronicMailAddress>
          </gmd:CI_Address>
        </gmd:address>
      </gmd:CI_Contact>
    </gmd:contactInfo>
    <gmd:role>
      <gmd:CI_RoleCode>
codeList="http://www.isotc211.org/2005/resources/Codelist/gmxCodeLists.xml#CI_RoleCode" codeListValue="originator">originator</gmd:CI_RoleCode>
      </gmd:role>
    </gmd:CI_ResponsibleParty>
  </gmd:contact>

```

10.1.1.5 **dateStamp**

Element Name	Description	Namespace
dateStamp	Date Stamp	gmd
Date	Formatted String (yyyy-MM-dd)	gco

The dateStamp should be used for the publication date (just day using gco:date or including the time using gco:datetime). The date and time where the ice chart is considered valid should be given in identificationinfo (see 10.1.1.6). Classic operational ice charts should have a time stamp within the temporal extent given in identificationinfo, a dateStamp preceding the temporal extent denotes a prognosis chart, a dateStamp that is more recent then the temporal extent denotes an historic reanalysis or a climatological chart.

```

<gmd:dateStamp>
  <gco:Date>2013-02-25</gco:Date>
</gmd:dateStamp>

```

</gmd:MD_DataIdentification>
</gmd:identificationInfo>

```

10.2 Language

The language used in metadata must be English. Other languages are optional and only as addition to the English version.

11 Maintenance

11.1 Maintenance and Update Frequency

Ice information datasets should be maintained if a new dataset of region and provider is available. There is no updating mechanism necessary, because the datasets itself will not updated. The old one have to be replaced with new one.

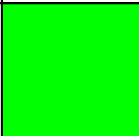

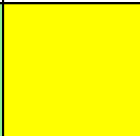

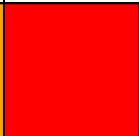

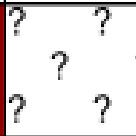

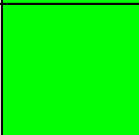

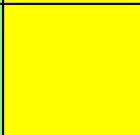

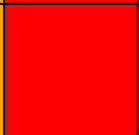

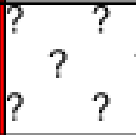

12.1 Rules

The `encoverlay` parameter helps to calculate the priority for display of single ice feature types. If `encoverlay` is true, the priority will be calculated, depending on priority of land area feature in ENC. The area objects of ice features should be displayed under the land area polygons, because they are usually drawn over the land.

12.2 Symbols

12.2.1 Polygon Features

12.2.1.1 IceNavigationalDisplayMode (Traffic Light Principle, depends on Ice Class)

Object Class	Acronym						
Sea Ice	seaice						
Lake Ice	lacice						
Iceberg Area	icebrg						

12.2.1.2 IceScientificIceactDisplayMode

iceact	description	rgb	color

12.2.4 Draw order

The highest number will be drawn on the top.

No.	Name	Acronym
1	Sea Ice	seacie
1	Lake Ice	lacice
2	Iceberg Area	icebrg
3	Ice Edge	icelne
4	Iceberg Limit	brgline
5	Limit of Open Water	opnlne
6	Limit of All Known Ice	lkilne
7	Line of Ice Ridge	l_ridg
8	Line of Ice Lead	l_lead
9	Line of Ice Fracture	l_fral
10	Line of Ice Crack	l_crac
11	Ice Compacting	icecom
12	Ice Lead	icelea
13	Iceberg	icebrg
14	Floeberg	flobrg
15	Ice Thickness	icethk
16	Ice Shear	iceshr
17	Ice Divergence	icediv
18	Ice Ridge / Hummock	icerdg
19	Ice Keel / Bummock	icekel
20	Ice Drift	icedft
21	Ice Fracture	icefra
22	Ice Rafting	icerft
23	Jammed Brash Barrier	jmdbrrr
24	Stage of Melt	stgmilt
25	Snow Cover	snwcvr
26	Strips and Patches	strptc
27	Grounded Hummock	l_grhm

13 Additional Information

Annex A – Data Classification and Encoding Guide

The data classification is generally done by ice services, the WMO publication 574 is given as reference in file WMO574.pdf. As a guide for encoding some python scripts are given in directory “software” to convert shapefiles (e.G. Sigrid-3) into S-411.

Annex B – Data Product format (encoding)

In directory “Schemas”

Annex D – Feature Catalogue

File S411FC.xml

Annex F – Portrayal Catalogue (SE, XSLT + SVG)

In directory “Portrayal”

Annex G – Encoding Example for all ice features

In directory “Test”

Annex I – Exchange Catalogue Example

In directory “Example”; templates for Metadata and Exchange set are also found in directory “software”.
